RIMUTAKA FOREST PARK

MOUNT HAWTREY BUSH

LOCATION

East of Wellington Harbour between Eastbourne and Wainuiomata.

AREA DESCRIPTION

Mount Hawtrey Bush forms the largest insular area of forest and scrub in the Wellington region. Situated on the eastern side of Wellington Harbour it separates the townships of Eastbourne and Wainuiomata. It extends approximately 7 km from north to south and about 3 km from west to east. The main eastern Hutt ridge divides at Lowry trig (373m) to form the two north-south ridges which dominate the topography of the area. Between these two ridges Gollans Valley headwaters form the major catchment, draining south toward Fitzroy Bay. The vegetation is mostly black and hard beech forest on weathered, in-situ, greywacke with broadleaved forest and scrub types on colluvial sites. Large areas of gorse, manuka and young kamahi scrub occupy the east ridge; especially on the slopes overlooking Wainuiomata. The west ridge, with Mt Hawtrey as the high point, rises steeply above the eastern bays to about 300m above sea level. Pockets of terrestrial northern rata forest occur at many of the gully heads where the slope is more gentle than below. Gollans Valley and the smaller Butterfly Creek contain lowland podocarp and pukatea forests on their narrow alluvial flats. Fires have extensively modified the vegetation throughout, leaving a jumble of different aged forest and scrub types. Fires have been less frequent in recent years.

ACCESS

Easiest from western side. A track from Williams Park in Days Bay leads up to the main ridge track. This is the most direct route into the area. Various trails and tracks follow ridges and streams throughout the area.

JUSTIFICATION FOR RESERVE STATUS

1. Forms largest insular area of forest and scrub in Wellington region.
2. Important area for birds. Contains all common native birds of the region as well as New Zealand falcon, whitehead and long tailed cuckoo.
3. Has considerable scenic, recreational and educational value.
4. Contains a wide diversity of vegetation types.

MODIFICATIONS AND TRENDS

Logging has removed most mature podocarps. Fires which occurred in the first half of this century have extensively modified the vegetation leaving a mosaic of different ages of forest. Recent fires have tended to be small and confined to the slopes adjacent to Wainuiomata. The area has a high level of recreational use, and scout parties, campers and day trampers frequent the area. Butterfly Creek is the most visited catchment. In both Gollans Valley and Butterfly Creek unsightly litter surrounds some camp sites. Deer, pigs and possums are present, the latter in large numbers. Feeding and browsing by these animals, possums particularly, is having a detrimental effect on the vegetation.

THREATS

1. Over-use by visitors.
2. Fires are still a threat throughout the area.
3. Overbrowsing by possums may cause more extensive damage if not controlled. The rata stands near the ridges may disappear. Many dead rata can be seen already. Further damage to the vegetation could lead to slope instability and erosion.

IMPROVEMENTS NEEDED

1. Regular control of possum numbers by an appropriate authority.
2. Regular litter removal from the main valleys.
3. A formed track in Gollans Valley, while making an ideal walkway would reduce damage to the forest by keeping all visitors on one track.

COMMENTS, RECOMMENDATIONS

This is the largest of the areas surveyed. Its size and proximity to major residential areas makes it very valuable. The main ridges rise above the Eastern Bays to form a natural and aesthetically pleasing backdrop to the harbour and bays. The wide diversity of scrub and forest types within form an important educational and scientific resource. Historically they are interesting, showing the effects of repeated fires. The area contains seven species of regionally rare or endangered native plants, most of which are in the Butterfly Creek catchment. Fires are less frequent than was once the case and the vegetation is steadily recovering. The ecological stability is still threatened by possums which defoliate most vegetation types reducing canopy area and ground cover. Severe erosion could eventually result. This would constitute a major problem were it to occur on the steep slopes above the Eastern Bays. The reduced diversity in forest type which results from possum browsing also has a detrimental effect on native bird populations. This area is important as a bird refuge. The whitehead, New Zealand falcon and long tailed cuckoo can only be seen elsewhere in the major state forest parks or other relatively inaccessible areas. Wider recognition of the importance of Mt Hawtrey Bush is needed to bring about its protection. It should be reserved and held under unified control and management. Careful management may be needed to maintain the area as a recreational facility while protecting the area from harmful influences.

COMMON VASCULAR PLANTS OF MOUNT HAWTREY BUSH

Trees and shrubs

* <i>Albizia lophantha</i>	<i>Dacrydium cupressinum</i>	<i>Nothofagus solandri</i>
<i>Alectryon excelsus</i>	<i>Dodonaea viscosa</i>	var <i>solandri</i>
<i>Alseuosmia pusilla</i>	<i>Dracophyllum longifolium</i> var	<i>N. truncata</i>
<i>Aristotelia serrata</i>	<i>Dysoxylum spectabile</i>	<i>Olearia paniculata</i>
<i>Beilschmeidia tawa</i>	<i>Elaeocarpus dentatus</i>	<i>O. rani</i>
* <i>Berberis glaucocarpa</i>	<i>E. hookerianus</i>	* <i>Osteospermum moniliferum</i>
<i>Brachyglottis repanda</i>	* <i>Erica lusitanica</i>	(<i>Chrysanthemoides monilifera</i>)
* <i>Buddleia davidii</i>	<i>Fuchsia excorticata</i>	<i>Paratrophis microphylla</i>
<i>Carmichaelia arborea</i>	<i>Gaultheria antipoda</i>	<i>Pennantia corymbosa</i>
<i>Carpodetus serratus</i>		* <i>Pinus</i> sp
<i>Cassinia leptophylla</i>		<i>Pittosporum eugenoides</i>
* <i>Chamaecytisus palmensis</i>	<i>Geniostoma rupestre</i> var	<i>P. tenuifolium</i>
<i>Coprosma areolata</i>	<i>Griselinea lucida</i>	<i>Podocarpus dacrydioides</i>
<i>C. foetidissima</i>	<i>Hebe stricta</i> var <i>atkinsonii</i>	(= <i>Dacrycarpus dacrydioides</i>)
<i>C. grandifolia</i>	<i>Hedycarya arborea</i>	<i>P. ferrugineus</i>
<i>C. lucida</i>	<i>Helichrysum aggregatum</i>	(<i>Prumnopitys ferruginea</i>)
<i>C. microcarpa</i>	<i>Knightia excelsa</i>	<i>P. spicatus</i>
<i>C. repens</i>	<i>Laurelia novae-zelandiae</i>	(= <i>Prumnopitys taxifolia</i>)
<i>C. rhamnoides</i>	<i>Leptospermum ericoides</i>	<i>P. totara</i>
<i>C. robusta</i>	<i>L. scoparium</i>	<i>Pseudopanax arboreus</i>
<i>C. rotundifolia</i>	<i>Leucopogon fasciculatus</i>	<i>P. crassifolius</i>
<i>C. tenuicaulis</i>	* <i>Leycesteria formosa</i>	<i>Pseudowintera axillaris</i>
<i>C. sp unnamed</i>	<i>Lophomyrtus bullata</i>	<i>Rhopalostylis sapida</i>
(<i>C. parviflora</i> - Oliver 1935)	<i>L. obcordata</i>	<i>Schefflera digitata</i>
<i>Cordyline australis</i>	<i>Macropiper excelsum</i>	<i>Senecio kirkii</i>
<i>C. banksii</i>	<i>Melicope ternata</i>	(= <i>Urostemon kirkii</i>)
<i>Coriaria arborea</i>	<i>Melicytus ramiflorus</i>	<i>S. aviculare</i>
<i>Corynocarpus laevigatus</i>	<i>Metrosideros robusta</i>	<i>Solanum laciniatum</i>
* <i>Cupressus lusitanica</i>	<i>Myoporum laetum</i>	<i>Sophora microphylla</i>
<i>Cyathodes fasciculata</i>	<i>Myrsine australis</i>	<i>Syzygium maire</i>
<i>C. juniperina</i>	<i>M. salicina</i>	* <i>Ulex europaeus</i>
* <i>Cytisus scoparius</i>	<i>Nestegis lanceolata</i>	<i>Weinmannia racemosa</i>

Climbers and Lianes

<i>Clematis hookeriana</i>	<i>M. fulgens</i>	<i>Ripogonum scandens</i>
<i>C. paniculata</i>	<i>M. perforata</i>	<i>Rubus australis</i>
<i>Freycinetia baueriana</i>	<i>Muehlenbeckia australis</i>	<i>R. cissoides</i>
ssp <i>banksii</i>		* <i>R. fruticosus</i>
<i>Metrosideros colensoi</i>	<i>Parsonsia heterophylla</i>	* <i>Senecio mikanooides</i>
<i>M. diffusa</i>	<i>Passiflora tetrandra</i>	

Grasses, rushes and like plants

<i>Agropyron scabrum</i>	<i>Dichelachne crinita</i>	<i>L. picta</i> var <i>pallida</i>
* <i>Agrostis tenuis</i>	* <i>Festuca arundinacea</i>	(<i>L. subclavata</i>)
* <i>Anthoxanthum odoratum</i>	<i>Gahnia pauciflora</i>	<i>Microlaena avenacea</i>
* <i>Briza minor</i>	<i>G. setifolia</i>	<i>Poa anceps</i>
<i>Carex dissita</i>	* <i>Holcus lanatus</i>	* <i>Poa annua</i>
<i>C. forsteri</i>	* <i>Juncus bufonius</i>	<i>Rytidosperma gracile</i>
<i>C. lambertiana</i>	<i>J. planifolius</i>	* <i>R. penicillatum</i>
<i>C. solandi</i>	* <i>J. tenuis</i>	<i>R. unarede</i>
<i>C. virgata</i>	<i>J. sp</i>	<i>Scirpus reticularis</i>
<i>Cortaderia fulvida</i>	<i>Lepidosperma australe</i>	(= <i>Isolepis reticularis</i>)
<i>C. toetoe</i>	<i>Luzula banksiana</i>	<i>Uncinia angustifolia</i>
<i>Cyperus ustulatus</i>	var <i>banksiana</i>	<i>U. banksii</i>
* <i>Dactylis glomerata</i>	<i>L. picta</i> var <i>picta</i>	<i>U. uncinata</i>
<i>Deyeuxia pilosa</i>		* <i>Vulpia bromoides</i>

Herbs

Acaena anserinifolia
 * *Achillea millefolium*
Acanthus fornicatus
